Art Unit: 2,155

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang (USP 5,956,521) in view of Beck (USP 5,826,101).

See at least the abstract and lines 4-13 of column 10 in Wang. Wang taught a message processing apparatus (e-mail system) for displaying and receiving messages sent from a sending and, comprising:

reception means,

program loading means (interrupt handler, see lines 4-13 of column 10),

execution means (processor for executing the loaded interrupt subroutine).

Wang does not show a decoder for extracting fields of a command or message. However, Beck taught a decoder (see lines 51-53 of column 20) for extracting key formations (fields). Decoder is an inherent component of an execution unit. One of ordinary skill in the art should readily recognize that the execution unit of Wang has a decoder as taught by Beck.
